

FUNDAMENTALS OF RADIO

The purpose of this volume is to give the basic material of radio required for all types of radio work. The authors have covered each topic in such a way as to make clear the working of a complete radio system, and have laid the foundation for a more advanced study of the subject. The reader need only have an elementary knowledge of algebra and the book has been written to give fundamental physical descriptions with a minimum of mathematics.

L. C. JORDAN - P. H. NELSON
W. C. OSTERBROCK
F. H. PUMPHREY - L. C. SMEBY

EDITED BY
W. L. EVERITT

*Professor of Electrical Engineering,
Ohio State University*

Fundamentals of RADIO

by
EDWARD C. JORDAN

ASSOCIATE PROFESSOR OF ELECTRICAL ENGINEERING
UNIVERSITY OF ILLINOIS; SENIOR MEMBER
INSTITUTE OF RADIO ENGINEERS

Table of Contents

CHAPTER	PAGE
1. MATHEMATICS OF RADIO	1
Need for mathematics in radio	1
The four fundamental operations	2
Fractions	3
Accuracy and significant figures	6
Scientific notation	7
Symbols of algebra	10
Some laws of algebra	11
Solving equations	16
Quadratic equations	19
Trigonometry	20
Vector addition	26
Graphs and curves	28
Logarithms	29
2. D.C. CIRCUITS	41
Introduction	41
Electrical quantities	42
Ohm's Law	43
Series circuits	45
Parallel circuits	46
Series-parallel circuits	48
Determination of resistance	50
Kirchhoff's Laws	51
Method of superposition	52
Power and energy	53
Fuses	56
Symbols and abbreviations	56
Batteries	56
Electromagnetism	60
Iron as a conductor of magnetism	62
D.C. generators	65
D.C. motor	67
Dynamotors	68
Electric meters	68
Practical circuit problems	71
Caution on use of voltmeter	72
3. A.C. CIRCUITS	75
Alternating current and voltage	75
Representation of sinusoidal waves	75
Adding alternating currents	76

TABLE OF CONTENTS

CHAPTER		PAGE
3. A.C. CIRCUITS (<i>cont.</i>)		
A.C. circuit with resistance		77
Peak, average, and R.M.S. values of A.C. waves		78
Rate of change of current in a sine wave		80
Sine waves in nature		81
Inductance		81
Lenz's Law		82
Magnitude of induced voltages		82
Energy stored in the magnetic field		84
Inductive reactance		86
Reactance voltage		87
Radius-vector representation of sine waves		88
Power in an inductance coil		88
Characteristic of reactance		89
The effects of frequency on inductive reactance		89
Resistance and inductance in series		90
Impedance and phase angle		91
The impedance of a circuit of several elements		93
Resistances and inductances in parallel		94
Power and power factor		97
The electric condenser		97
Dielectric constant		98
Capacitance of a condenser		99
Relation between voltage and current in a condenser		99
Capacitive reactance		100
Resistance and capacitance in series		101
Resistance, inductance, and capacitance in series		101
Resistance, inductance, and capacitance in parallel		103
General concepts of resonance		105
Series resonant circuits		106
Parallel resonance		108
Impedance matching		109
Wave meters		110
Mutual inductance		110
Effect of the secondary		111
Use and characteristics of the transformer		111
Coefficient of coupling		113
Selectivity and coupling		115
Alternating-current meters		116
Alternating-current bridges		118
Resonance testing methods		119
A.C. power sources		119
Voice and music waves		119
Circuits carrying both direct and alternating current		120
4. ELECTRONIC PRINCIPLES		121
Introduction		121

TABLE OF CONTENTS

ix

CHAPTER		PAGE
4. ELECTRONIC PRINCIPLES (cont.)		
Thermionic emission		121
Physical construction of cathodes		122
Diodes		122
Effect of gas		125
Limitations in operating conditions		126
Triodes		127
Characteristic curves of triodes		127
Tube parameters or characteristics		129
Components of currents and voltages		130
The load line		131
The equivalent circuit		132
Tetrodes		133
Plate characteristics of a tetrode		134
Pentodes		136
Variable-mu or remote-cutoff pentodes		137
Beam power tubes		138
Dual-purpose tubes		140
Cathode-ray tubes		140
Electron-ray tubes		142
Review questions and problems		143
5. RECTIFIED POWER SUPPLIES		145
Half-wave rectifier		145
Full-wave rectifier		145
Voltage-doubler rectifier		146
Filter circuits		147
Rectifier tubes		149
Regulated power supplies		150
Triode regulators		150
Review questions and problems		151
6. SOUND AND ITS ELECTRICAL TRANSMISSION		153
Nature of sound		153
Distortion		153
Microphones		155
Reproducers		157
Telephone circuits		158
Telephone lines		159
Review questions and problems		162
7. AUDIO AMPLIFIERS		165
Fundamentals of amplifiers		165
Classification of amplifiers		166
Resistance-capacitance-coupled amplifier		166
Frequency response of a resistance-coupled amplifier		170
Gain of an audio amplifier		170
The pentode amplifier		172
Multistage audio amplifiers		173

TABLE OF CONTENTS

CHAPTER		PAGE
7.	AUDIO AMPLIFIERS (<i>cont.</i>)	
	Hum and tube noise	175
	Over-all gain and frequency response	176
	Nonlinear distortion in audio amplifiers	176
	Dynamic characteristics of a vacuum-tube circuit	178
	Selection of the operating point	180
	Avoiding nonlinear distortion	180
	Transformer-coupled amplifier	181
	Push-pull circuits	184
	Power amplifiers	185
	Inverse feedback	186
	Video amplifiers	189
	Direct-current amplifiers	190
	Public-address systems	192
	Review questions and problems	201
8.	VACUUM-TUBE INSTRUMENTS	203
	Oscillators	203
	Cathode-ray oscilloscopes	206
	Vacuum-tube voltmeters	210
	Review questions and problems	211
9.	ELECTROMAGNETIC WAVES	213
	Nature of waves in any medium	213
	Transverse and longitudinal waves	215
	Phase in wave motion	216
	Reflected waves and standing waves	217
	Electromagnetic waves on wires	219
	Sound waves and electromagnetic waves	220
	Standing waves	223
	Waves in three dimensions	224
	Dimensions of an antenna	226
	Radiation resistance	226
	Mechanism of radiation	227
	Direction of the electric and magnetic fields	228
	The receiving antenna	228
	Review questions and problems	229
10.	TRANSMISSION OF SIGNALS BY RADIO	231
	Radio communication systems	231
	Radiotelegraphy	231
	Radiotelephony	231
	Radio facsimile	231
	Television	231
	Audio-frequency electromagnetic wave radiation	232
	Modulation	232
	Common use of the transmission medium	233
	Allocation of channels	234
	Radio communication system	234

	Single-ended radio amplifier output circuits	249
	Grid-bias voltage supplies	250
	Voltage and power amplification	252
	Radio amplifier classifications	252
	Class A radio-frequency amplifier	253
	Neutralization	257
	Class A pentode radio amplifier	258
	Shielding	259
	Typical pentode radio amplifier	260
	Screen-grid voltage supplies	261
	Tetrode radio amplifiers	262
	Filtering D.C. supply circuits to radio amplifiers	262
	Transmitter output tube complements	263
	Class B radio-frequency amplifier	267
	Class B audio amplifiers	269
	Class C radio amplifiers	272
	Pentode radio amplifiers, class B and class C	273
	Pentode audio amplifier, class B	273
	Detection or demodulation	273
	Types of rectifiers	276
	Triode detectors	279
	Heterodyne detection of continuous waves	282
	Detection of interrupted continuous-wave signals	283
	Review questions and problems	284
12.	AMPLITUDE-MODULATION RADIO TRANSMITTERS	285
	Radio-frequency section	285
	Audio-frequency section	286

TABLE OF CONTENTS

CHAPTER		PAGE
12. AMPLITUDE-MODULATION RADIO TRANSMITTERS (cont.)		
Over-all transmitter efficiency		287
Crystal oscillators		288
Buffer amplifiers		291
Modulated amplifiers		291
Modulators		295
Regulation of plate power supply for class B radio amplifiers		295
Regulation of plate power supply for class B audio amplifiers		298
Regulation of plate power supply for modulated class C radio amplifiers		299
Regulation of bias supplies		299
Schematic circuit of a transmitter		299
Radio-frequency section		299
Audio-frequency amplifier		303
Second audio bias-supply rectifier		305
Low-power plate-supply rectifier		305
Modulator bias rectifier		305
High-voltage plate-supply rectifier		305
250-watt transmitter		311
Inverse feedback in transmitters		311
Review questions and problems		313
13. AMPLITUDE-MODULATION RADIO RECEIVERS		315
Sensitivity		315
Selectivity		316
Fidelity		316
Simple receiver		317
Tuned radio-frequency receiver		318
Multistage radio-frequency receiver		318
Threshold sensitivity of a receiver		319
Superheterodyne receiver		320
Automatic volume control		321
Squelch circuit		322
Superheterodyne receiver circuit		324
Review questions and problems		326
14. FREQUENCY MODULATION		327
General principles		327
Wide-band frequency modulation, an outgrowth of the search for static eliminators		331
Other factors in frequency-modulation systems		332
Frequency-modulation systems for communication services		333
Frequency-modulated transmitters		334
Frequency-modulation receivers		336
Review questions and problems		339
15. RADIO WAVE PROPAGATION		341
General nature of propagation		341
Polarization		341
The ground wave		342

CHAPTER		PAGE
15. RADIO WAVE PROPAGATION (cont.)		
The sky wave		343
The ionosphere		343
Effect of the ionosphere on the sky wave		345
Critical frequencies		348
Absorption in the ionosphere		349
Regular variations in the ionosphere		350
Fading		352
Reduction of fading		353
Static and man-made noise		354
Noise-reducing systems		355
Ultrahigh-frequency propagation		357
Summary of radio wave propagation		359
Review questions and problems		361
16. RADIO ANTENNAS		363
Functions of an antenna system		363
The elevated half-wave antenna		363
Radiation characteristics of a half-wave antenna		364
The grounded antenna		365
Antennas of other heights		367
Losses and efficiency		367
Ground systems		369
Radio-frequency transmission lines		369
Characteristic impedance and nonresonant lines		370
Losses on lines		371
Quarter-wave matching sections		372
Parallel-wire and concentric lines		372
Coupling networks		374
Directional antenna systems		379
Directivity of a single half-wave antenna		379
Vertical antennas spaced one half wave length		380
Other phases		383
Other spacings		383
Line of antennas		384
Horizontal patterns of horizontal antennas		384
Colinear array		385
Effect of the ground on vertical radiation patterns		385
Loop antennas		386
Radio beacons		387
Direction finders and radio compasses		389
Review questions and problems		391
