# Contents

**Acknowledgments** *vii*

**Introduction** *viii*

**1 A brief history of radio receivers** *1*

Nineteenth-century experiments *1*

Transatlantic wireless *2*

New inventions *3*

Broadcasting *4*

Development of radio receivers *4*

Crystal sets—regenerative detector receivers—Tuned radio frequency receivers—Neutrodyne receivers—Second-generation TRF radios—Superheterodyne receivers

**2 Vacuum tube radios** *18*

Radio construction styles *19*

Early vacuum tubes *23*

**3 Vacuum tubes—how they work** *29*

Edison effect *29*

Thermionic emission of electrons *30*

The vacuum tube diode *30*

Cathodes—Diode construction—Diode operation

Triode vacuum tubes *37*

Tetrode vacuum tubes *41*

Pentode vacuum tubes *43*

Beam power tubes 46  
Other matters to consider 47  
Multipurpose tubes 49  
Tube bases and envelopes 50  
Testing vacuum tubes 50  
    Vacuum tube testers—Short-circuit tester—Emission  
    testers—Transconductance testers—Commercial tube testers

#### **4 Radio receivers: The basics 56**

Radio signals 56  
The tuner 58  
Tuned radio-frequency radios 62  
Superheterodyne radios 63  
Radio example 65

#### **5 Radio power-supply circuits 69**

Battery-operated sets 69  
ac power supplies 70  
Components of the ac power supply 71  
    Transformers—Transformer construction—Is that transformer  
    shorted?—Rectifiers—Ripple filtering  
Solid-state rectifiers 88  
Selecting solid-state rectifier diodes 89  
Voltage regulators 91  
ac/dc power supplies 92  
“All American Five” radio power supplies 93

#### **6 The audio section 95**

Audio reproducers 95  
    Earphones—Loudspeakers  
Audio preamplifier circuits 102  
Volume-control circuits 104  
Tone controls 108  
Audio-output stages 109  
    Classes of audio power amplifier—Class-A power amplifiers—Push-  
    pull class B and class AB audio power amplifiers—Screen grid  
    feedback circuits  
Replacing volume, tone or RF gain controls 115  
Replacing multiresistors 116  
Replacing electromagnet loudspeakers with permanent loudspeakers 117

## **7 The radio front-end: rf amplifiers, first detectors, and if amplifiers 118**

Tuned resonant circuits 118

Vectors—Inductance and inductors—Combining inductors—Adjustable coils—Inductors in ac circuits

Capacitors and capacitance 125

Units of capacitance—Breakdown voltage—Circuit symbols for capacitors—Fixed capacitors—Other capacitors—Variable capacitors—Capacitors in ac circuits—Voltage and current in capacitor circuits

LC resonant circuits 140

Series-resonant circuits—Parallel-resonant circuits

Tuned RF/IF transformers 143

Construction of RF/IF transformers—Bandwidth of RF/IF transformers

RF amplifier circuits 148

Superheterodyne receivers 151

Superheterodyne local-oscillator circuits—Pentagrid converter circuits

## **8 AM detector and automatic volume-control circuits 158**

Review of amplitude modulation 158

AM detectors—Fleming and DeForest detectors—Plate detection—Grid-leak detectors—Regenerative detectors—Modern diode detectors—Solid-state diode detectors

Automatic volume control circuits 170

Tweet filters 172

## **9 Radio repair bench test equipment 174**

Multimeters 175

The VOM—The VTVM—The DMM

Older instruments 177

Signal generators 178

Audio generators—Function generators—RF signal generators

Oscilloscopes 181

dc power supplies 183

Other instruments 183

## **10 Basic radio troubleshooting 185**

Hum in the radio output (radio works otherwise) 186

Power-supply ripple hum—60 Hz nontunable hum—Tunable hum

Dead radio 190

Finding the defective stage 192

Weak signal reception 193

Motorboating	195
Noise problems	195
Oscillations	198
Microphonics—Chirps and birdies—Tunable oscillations—Other high-frequency oscillations	
Distortion	203
Loudspeaker—Defective vacuum tubes—Shorted cathode bypass capacitors—Open or increased-value resistors—Shorted or leaky coupling capacitors—Shorted or open output-transformer winding	
<b>11 Troubleshooting intermittent problems</b>	<b>206</b>
Finding the intermittent	207
Mechanically intermittent—Thermal intermittents	
Problems with IF and RF transformers	212
<b>12 Radio alignment techniques</b>	<b>215</b>
AM radio receivers	215
Coupling the signal generator to the radio—Signal output-level indicator—AM alignment procedure	
FM radio receivers	222
Alignment tools—Alignment using an unmodulated generator—Alignment using a sweep generator	
Stereo section alignment	228
Alignment tools	230
Conclusion	231
<b>13 Repairing water damage to radios</b>	<b>232</b>
Cleaning steps	233
Drying procedures	234
Testing	234
<b>14 Electrical safety on the workbench</b>	<b>238</b>
Electrical shock	238
What to do for an electrical shock victim	239
How much current is fatal?	240
Is high current, low voltage safe?	241
Common hazardous electrical shock situations	241
Some cures for the problems	243
Some general advice on safety	245
Conclusion	245
<b>Appendix: Component color code</b>	<b>246</b>
<b>Index</b>	<b>252</b>
