# Contents

Introduction: Who Builds Radios Today?

Chapter 1: Types of Receivers

Discussion of the Drawings of this Book

The Crystal Radio

The Regenerative Radio

The TRF Receiver

The Superheterodyne Receiver

The Super-regenerative Receiver

The Direct Conversion Receiver

Conclusion

Chapter 2: Types of Digital Receivers

Digitally Synthesized Analog Superhet

All Digital Receivers

Digital Modulation

Spread Spectrum

Chapter 3: Radio Services Currently Available

Long Wave

Medium Wave

Shortwave

FM Broadcast Band

Above 108 MHz

Internet Radio

Big Dish Satellite Radio

XM and Sirius Satellite Radio

Summary

## Chapter 4: Old Regenerative Radio Circuits

- The Grid Leak Detector
- The Original Regenerative Radio
- Frequency Dials
- Spurious Radiation
- DeForest Versus Armstrong
- Passive and Active Regeneration Control
- Problems Associated with the Regeneration Control
- Regeneration Control Methods

## Chapter 5: The New Regenerative Radio

- Replacing the Tube in an Old Circuit With a Transistor
- Regenerative Radio Configurations
- Block Diagram for All Regenerative Radios
- The Regenerative Amplifier
- The Interim Amplifier
- The AM Detector
- The Audio Power Amplifier

## Chapter 6: Other Circuits Using the Regenerative Principle

- RF Oscillators
- Rudimentary AM Transmitter
- The Q-multiplier
- The Regenerative IF Amplifier

## Chapter 7: Mechanical Aspects of Radio Design

- Breadboard Type of Radio Construction
- Chassis Type of Construction
- Printed Circuits
- Prototyping Tube Circuits
- Semiconductor Prototyping

Variable Capacitors  
Mechanical Reduction Drives  
Variometers and Other Inductors  
Panels  
Frequency Dials  
Knobs and Pointers  
Dial Lighting

## Chapter 8: Vacuum Tube Radio Design and Components

Availability of Parts  
Vacuum Tubes  
Early Dry Battery Tubes  
Indirectly Heated Cathode Tubes  
Rectifier Tubes and Diodes  
Transformers for Tube Designs  
AC-DC Series String Radios

## Chapter 9: Semiconductor Radio Design and Components

Bipolar and Field Effect Transistors  
Integrated Circuits  
Passive Components  
Frequency Linearity of Tuning Circuits  
Varactor Tuning Circuits

## Chapter 10: Electronic Test Equipment

Inexpensive Testing  
Personal Computers and Software  
Pricing  
Inexpensive Instruments  
Calibration Standards

## Chapter 11: Complete Receivers

The Ocean Hopper

The Space Spanner

The Globe-Span Modern Transistor/IC Regenerative Radio

Further Modifications and Improvements of the Transistor/IC Radio

Newly Designed Vacuum Tube Regenerative Radio

# Tables, Drawings, and Photographs

Introduction:

Chapter 1: Types of Receivers

TABLES:

- 1-1 Frequency Ranges of the Shortwave Bands
- 1-2 Toroidal Inductor Winding Instructions for the  
Shortwave Broadcast Bands

FIGURES:

- 1-1A A Crystal Radio Schematic
- 1-1B A Home Constructed Crystal Radio
- 1-1C A Manufactured Crystal Radio
- 1-2 A Crystal Detector in a Holder
- 1-3A Voltage Versus Current (V-I) Characteristic of a Diode
- 1-3B How the Diode Characteristic Removes the Negative Half of  
a Signal
- 1-4 The Classical Illustration of the Detection of an AM Signal
- 1-5 A Grid Leak Detector
- 1-6 Regenerative Radio Similar to Armstrong's Original
- 1-7 A Tuned Radio Frequency (TRF) Receiver
- 1-8A Block Diagram of a Superheterodyne Radio
- 1-8B Schematic Diagram of a Superheterodyne Receiver
- 1-9A A Super-regenerative Receiver
- 1-9B Output Waveforms of a Super-regenerative Receiver
- 1-10 Block Diagram of a Direct Conversion Receiver

Chapter 2: Digital Radio

- 2-1 A Digitally Synthesized Analog Receiver

## Chapter 3: Radio Media

## Chapter 4: Old Regenerative Designs

- 4-1 A Grid Leak Detector
- 4-2A The AM Input Signal to the Grid Leak Detector
- 4-2B The Signal at the Grid of the Grid Leak Detector
- 4-3 A Vacuum Diode AM Detector
- 4-4 The First Regenerative Detector
- 4-5 A “Log” Dial Used for Tuning
- 4-6 DeForest’s Regenerative Radio
- 4-7 Regeneration Control by Throttling Capacitor
- 4-8 Regeneration Control by Variable Resistor
- 4-9 Regeneration Control by Changing Plate Voltage
- 4-10 Regeneration Control by Changing the Screen Voltage
- 4-11 Regeneration Control by Changing the Control Grid Bias

## Chapter 5: New Regenerative Radio Designs

- 5-1 Replacing the Vacuum Tube in an Antique Circuit with a JFET
- 5-2 An Alternate Method of Replacing a Tube with a JFET
- 5-3 Tickler Coil Regenerative Circuit
- 5-4 Tuned Collector (Tuned Plate) Regenerative Circuit
- 5-5 Pierce Regenerative Circuit
- 5-6 Hartley Regenerative Circuit
- 5-7 Colpitts Regenerative Circuit
- 5-8A Block Diagram of a Regenerative Receiver
- 5-8B Alternate Block Diagram for Tube Regenerative Receivers
- 5-9 A Colpitts Regenerative Amplifier
- 5-10 A Dual Gate MOSFET Colpitts Regenerative Amplifier
- 5-11 JFET Version of Colpitts Regenerative Amplifier
- 5-12 A Hartley Regenerative Amplifier
- 5-13 A Hartley Regenerative Amplifier with Buffer
- 5-14 An Interim Wide Band RF Amplifier

- 5-15 A High Gain Interim Audio Amplifier
- 5-16 Dual Triode Interim Audio Amplifier
- 5-17 Detector Used in Most Commercial AM Receivers
- 5-18A AM Detector For Use When Source is at Zero DC Offset  
Voltage
- 5-18B AM Detector That Works When There is a DC Component  
in the Input RF Signal
- 5-19 Non Loading Detector That Works With an Input DC Offset
- 5-20 An Integrated Circuit Audio Power Amplifier
- 5-21 A Vacuum Tube Power Amplifier

## Chapter 6: Other Circuits Using the Regenerative Principle

- 6-1 A Tickler Coil RF Oscillator
- 6-2 A Low Power AM Transmitter
- 6-3 A Q-Multiplier Add On Circuit
- 6-4 A Regenerative IF Stage in a Superheterodyne Receiver

## Chapter 7: Mechanical Aspects of Radio Design

- 7-1 An Example of Metal Chassis Construction
- 7-2 A Nibbling Tool and Several Chassis Punches
- 7-3 A Vacuum Tube Radio on a Printed Circuit Board
- 7-4A A Transistor and Integrated Circuit Printed Circuit Board
- 7-4B Underside of the Printed Circuit Board Before the Parts Are  
Inserted
- 7-5 A Transistor and IC Circuit Fabricated on Vector Board
- 7-6 Circuit Connections on a Spring Terminal Board
- 7-7 Variable Tuning Capacitors
- 7-8 A Variometer Inductor
- 7-9 Various Inductors
- 7-10 Tuning Dial For a Nine Band Variable Capacitor Tuned  
Receiver
- 7-11 Tuning Dial For a Six Band Varactor Tuned Receiver
- 7-12A Control Knobs

7-12B Underside of Above Control Knobs

## Chapter 8: Vacuum Tube Radio Design and Components

8-1 Octal Base and Miniature Glass Vacuum Tubes

## Chapter 9: Semiconductor Design

9-1 Dial From a 1936 Philco Radio

Table 9-1 Changes In Tuning Capacitance Needed to  
Produce Equal Changes In Frequency

9-2(A-D) Varactor Tuning Curves

9-3 Full Details of the Simplified Circuit of Figure 9-2D

## Chapter 10: Electronic Test Equipment

10-1 An Analog Volt-Ohm-Milliampere (VOM) Meter

10-2 A Digital Multi-Meter

10-3 A Circuit For Measuring an RF AC Signal on a DC Meter

10-4 A Digital Inductance-Capacitance-Resistance (LCR) Meter

10-5 An Audio Signal Generator

10-6 A Radio Frequency (RF) Generator

10-7 An Inexpensive Frequency Counter

10-8 A Homebuilt Crystal Controlled Marker Generator

10-9 A Noise Bridge For Measuring Impedance

10-10 An Oscilloscope

## Chapter 11: Complete Receivers

11-1 The Ocean Hopper Radio Schematic

11-2 Three Views of the Ocean Hopper Radio

11-3 The Space Spanner Radio Schematic

11-4 The Space Spanner Radio

11-5 Schematic Diagram of Globe Span Receiver

- - - Parts list of the Globe Span Receiver

- 11-6A The Globe Span Radio Front View
- 11-6B The Globe-Span Radio Rear View
  
- 11-7 Full Scale Printed Circuit Foil Side Pattern for the Globe-Span Radio
- 11-8 Parts Placement Diagram for Printed Circuit in Figure 11-7
- 11-9 Front Panel of the Globe-Span Radio
- 11-10 Schematic of the Tube Regenerative Radio
- 11-11 The Vacuum Tube Regenerative Radio with Plug-in Coils
